Board of Inquiry into the McCrae landslide

Before: The Chairperson, Ms Renée Enbom KC

County Court of Victoria, 250 William Street, Melbourne, Victoria

Friday, 9 May 2025 at 10.30am

(Day 3)

- Mr M. Costello KC with Mr A. Di Stefano and Ms A. Kittikhoun appeared as Counsel Assisting.
- Ms K. Evans KC with Ms E. Peppler and Mr C. McDermott appeared on behalf of the State of Victoria.
- Ms K. Foley SC with Ms E. Bateman, Mr C. Viney and Dr W. Phillips appeared on behalf of the Mornington Peninsula Shire Council.
- Ms D. Siemensma appeared on behalf of South East Water Corporation.

1	CHAIRPERSON: Mr Di Stetano.
2 3 4	MR DI STEFANO: Good morning, Chair. We start with Mr David Simon
5 6	CHAIRPERSON: Is Mr Simon in the room?
7 8 9	MR DI STEFANO: who I call.
10	<pre><david affirmed:<="" pre="" simon,=""></david></pre>
11 12	<examined by="" di="" mr="" stefano:<="" td=""></examined>
13 14 15 16 17 18 19	CHAIRPERSON: Mr Simon, Mr Di Stefano is one of the counsel assisting this inquiry. He's going to ask you some questions, and when he's finished others at the Bar table might have some questions for you. A. Sure.
20 21 22	MR DI STEFANO: Good morning, Mr Simon. A. Good morning.
23 24 25 26	Q. If you could please state again your full name for the transcript. A. David Simon.
27 28 29	Q. And what's your professional address?A. 90 Besgrove Street, Rosebud.
30 31 32 33 34	Q. Thank you. And your occupation? A. I'm normally the manager of development services at Mornington Peninsula Shire, but I'm currently acting director of planning and environment.
35 36 37 38	Q. Thank you. And you're attending today to give evidence pursuant to a notice to appear; is that correct? A. Correct.
39 40 41	Q. Notice to attend, I should say? A. Correct.
42 43 44	Q. And there are three witness statements that have been prepared for you? A. Correct.
45 46 47	Q. Can a copy of the witness statements and the exhibits please be provided to Mr Simon. Thank you. If you're

1 2 3 4	happy to and those are going to be your evidence in this inquiry, can you please sign those? A. Yes.
5 6 7 8 9 10 11 12 13	Q. Thank you. Chair, I tender those three witness statements and their exhibits, being the witness statements dated 11 April, 17 April and 7 May 2025.
	CHAIRPERSON: Thanks, Mr Di Stefano. The witness statement of David Simon dated 11 April 2025 will be exhibit CA12
	EXHIBIT #CA12 WITNESS STATEMENT OF DAVID SIMON DATED 11 APRIL 2025
16 17 18	CHAIRPERSON: The witness statement of David Simon dated 17 April 2025 will be CA13.
19 20 21	EXHIBIT #CA13 WITNESS STATEMENT OF DAVID SIMON DATED 17 APRIL 2025
22 23 24	CHAIRPERSON: And the third witness statement of David Simon dated 7 May 2025 is CA14.
25 26 27	EXHIBIT #CA14 THIRD WITNESS STATEMENT OF DAVID SIMON DATED 7 MAY 2025
28 29 30 31	MR DI STEFANO: Thank you, Chair. Mr Simon, you are currently, as you said, the acting director of planning and environment at the shire? A. Correct.
33 34 35	Q. And you started in that role on 17 March 2025? A. Correct.
36 37 38 39	Q. How long had you worked at the shire for prior to starting that role in March? A. Since 3 August 2021.
40 41 42	Q. And that entire time you've been at the shire you've worked in planning roles? A. Yes.
43 44 45 46 47	Q. And prior to working with the shire your statement explains that you've worked in town planning since approximately 2006? A. Correct.

- Q. And you've also worked at a variety of different councils, including the South Gippsland Shire Council and the Surf Coast Shire Council?
- A. Correct.
- Q. Are you able to assist the inquiry by explaining in general terms how overlays work in the Mornington Peninsula Shire planning scheme?
- A. Sure. At a very high level I suppose they're a control or one of multiple controls within a planning scheme. So the planning scheme is made up of different parts. At the very start of it it's got the municipal planning strategy sorry, the planning policy framework as well, which is a sort of, I suppose, overarching policies relating to, like, statewide matters. It can also contain regional sort of clauses or local clauses.

Then you have the zones, which apply to every piece of land, and then you've got overlays, and overlays, I suppose, invariably apply to different properties in different ways depending on I suppose the environmental constraints of the land, their location in terms of neighbourhood character, heritage, whatnot. So there are a number of different types of overlays, and I don't think any two are the same, and they're there for different purposes.

On top of that you've also got - and, sorry, I'm explaining the broader context of this because I think --

- Q. No, no, I appreciate it. You're answering well. Thank you.
- A. -- it's important, or probably will become apparent why that's important. Then you've also got particular provisions after the overlays, which are again statewide. They have schedules that can be locally varied from time to time and contain things like exemptions. Then you've also got general provisions at the back of the scheme, which contain some exemptions or some guidance on things like existing use rights as an example.

Then the final part of the scheme, which is the sort of overarching bit which basically dictates how the scheme is to be interpreted, when it came into effect, and I suppose the meaning of terms as well, so it's got a dictionary definition of what's - or how you would go about

4

5

Q. Yes. And so when an application is made to the shire for a planning permit or planning approval that application is made to a particular - it will be allocated to a particular planning officer?

A. Correct.

6 particu 7 A. Co

8

10

11

12

13 14

15

- Q. And that planning officer will have to consider all of the elements, in effect, that apply to that given piece of land within the planning scheme?
- A. Correct, and also, I suppose to caveat that, I think because every application is different on every site, so depending on what the proposal is will depend on whether or not it actually requires a planning permit under the zone overlay or particular provision or not.

16 17 18

19

Q. Yes. And is it the case that overlays can apply to part of a property, not the entire property?

A. Correct.

202122

23

24

25

26

27

28

29

30

31

32

33

34

35

36 37

38

39

- Q. So the way that the planning officer determines that is they have a the shire maintains a system, a digital system, which is a map that records the overlays that apply to a particular point?
- Probably with one small caveat there. The shire doesn't necessarily maintain that. We do have an internal But, because the planning scheme is a GIS that has that. state-based document, the zones and overlays by their nature are actually I suppose state based, and that's shown in VicPlan, if you like, and so that - well, VicPlan and the Vic property system will show which zone or overlay applies, and it also might show things that aren't technically an overlay in a planning scheme, such as Aboriginal cultural heritage sensitivity and also bushfire-prone areas, which aren't a planning scheme overlay. Then there might be other overlays which, say, the council has in existence which are in the GIS that aren't actually in the planning scheme but might require some consideration to be given to them.

40 41 42

43

Q. When you say overlay in that context do you mean a digital overlay as opposed to the statutory overlay?

A. Correct.

44 45 46

47

 ${\tt Q.}$ Yes. I'm sure we're going to get confused on that, but we'll try our best not to.

4

5

6

7

8

9

10 11

12

13

14

15

16

17

18 19

20

21

22

23

24

In terms of the tiers of the scheme, it's correct, isn't it, that it's the council that administers that scheme irrespective of the source of that - of the source of the relevant planning control document? Largely, yes. Again, with a caveat. Clause - as I said, you know, in terms of the layout of the scheme, there is a clause in the back of the scheme in that sort of general part, in the clause 70s - off the top of my head I can't remember exactly which one, but I think it's 72.02 or 73.02. In that part it dictates, I suppose, who is the responsible authority and when for considering an application, and there might be exemptions for - the general rule is that councils do process almost all the permits on the peninsula, but there's exemptions such as Arthurs Seat Eagle, was an example, where the Minister for Planning is the responsible authority and where council has no power to consider anything. And there's other various things in there as well, particular applications is an example in the particular provisions where it might be for State Government housing or federal government-funded housing, NDIS-type stuff, where council would not be the responsible authority. So that's all set out in that clause.

252627

Q. Yes. And approximately how many personnel are in the planning department, if that's the correct departmental name?

29 30

31

32

33

34

28

A. Yes, so there's probably two components to that. There's the statutory planning team, which reports to me as the manager of development services. We've got approximately 62 full-time equivalent positions. About 50 of those are statutory planners, and about 12 of those are planning support or planning administration.

35 36 37

Q. Yes.

A. And then, to clarify as well, strategic planning does not sit within my substantive role, that sits in another area, and it's got approximately 11 full-time equivalent roles. Then there's also planning compliance, which sits in a different team. Off the top of my head I don't know what the FTE count is there, but I believe that there's about five or six FTE dedicated to planning compliance.

44 45 46

47

43

Q. Yes. So you in your current role oversee the statutory planning team?

1 A. Correct.

Α.

- Q. And the strategic planning team, who is it that oversees that?
- A. It's Katanya Barlow.

- Q. Yes. And what's her title?
- Q. Yes. Have you ever been part of the strategic planning team?

 A. At various times, yes. Well, both in New South Wales and Victoria. So when I started off my career in New South Wales I was part of a broader development services team that included engineers; strategic/statutory planners; rangers, like local laws officers; building surveyors; and environmental health officers. Then in Victoria for a period of time I did also manage the strategic planning team at South Gippsland Shire Council for short periods of time.

Manager of strategic and infrastructure planning.

Q. Yes. And can you explain for the chair the difference in work between the statutory planning team and the strategic planning team?

A. So statutory planning concerns itself with the day-to-day sort of operation of issuing planning permits or considering planning permits and giving advice to the public about whether they do or don't need them and, if they do need them, what's required to be submitted with an application and what the considerations are.

Strategic planning is more the process of administering what is in the scheme and for what reasons. So as an example, you know, if you want to apply, there's state-based provisions - for, say, heritage overlay or environmental significance overlay, erosion management overlay there's the state-based provision. But if you want to have a local schedule for that to address that particular issue, generally - not always, but generally - the council will be the planning authority instead of a responsible authority under the Planning and Environment Act for processing and putting in place that overlay.

The caveat there I suppose for strategic planning is that the minister themselves can make amendments to the planning scheme. Also private developers can lodge planning scheme amendments with council to consider, or

7

14 15

16

17

18

13

19 20 21

Α.

Correct.

22 23

24 25 26

27 28 29

43

39

44 45

46

47

.09/05/2025

more often than not with council. I suppose they could in some instances approach the State Government for that. invariably it would usually be processed by the council.

And also the Act - I don't think this is done often, but I think it's section 9 of the Act allows the Minister for Planning to give authority to other ministers or other departments to basically go through the planning scheme An example might be, and I don't know that it's been utilised, but someone like Melbourne Water, as an example, to advance a flood overlay or a land subject to inundation overlay. But to my knowledge I think that's pretty rare.

So is it fair to kind of summarise that detailed explanation to say the strategic planning team is directed to policy considerations of what the planning requirements are as opposed to the statutory planning team, which administers the planning requirements?

And you mentioned erosion management overlays in your It's obviously - you were in court answer there. yesterday. You know it's a matter of significant interest? Α. Yes.

- You would have had experience with those, I assume, in your previous roles at other shires? Correct, yes. Α.
- And are you able to explain to the chair generally how an erosion management overlay, or an EMO, operates? I'm not sure if it's possible, but it might be best explained if we actually put maybe a copy of the clause up.
- It's INQ.0003.0001.0001. Q. Yes. Perhaps we could start at .0086, please.
- That might be showing the planning policy framework that I alluded to earlier, but that's not the actual EMO itself.
- Yes, I realise that, but I thought we might as well Q. start here.
- Α. Okay. Sure.

(3)

So if you could explain to the chair in reference to your answer earlier what is this part of the planning

1 scheme?

A. So this is I suppose the planning policy framework which - the Victoria planning provisions establishes, I suppose, the layout of the scheme, as I described earlier, in sections. So clause 13 - before you get to this bit where it says 13.04-2L, L signifies that it's a local component of the state planning policy framework. Before that there would probably be one that has like an R or doesn't have a letter necessarily, and that signifies that it's a state-based one.

So when you get to this part of it it basically is setting a broader policy objective or strategy for erosion management overlays, and it's a bit strange, I've never actually picked up there's a question mark in the middle of it, in the title. But here it only I suppose mentions or calls out specifically two of these, and that might be as a result of when they were implemented versus some of the other controls. So this isn't, I suppose, a permit trigger, if you like, or a permit requirement. This is an overarching policy that may apply if a permit is triggered.

 ${\tt Q.}$ $\;$ Yes. So it sets out objectives as opposed to requirements?

A. Correct.

Q. And you can see there under the last dot point before the table it has the loss of life risk defined?

A. Yes.

Q. Are you able to explain to the chair the relevance of that?

A. To some extent, yes, and I suppose referring back to the evidence of Mr Paul and Mr Pope in the questions they received around probably what is the threshold that council in this case as the responsible authority would be willing to accept in relation to considering applications, and, look, I suppose outside - I want to quantify or, sorry, to clarify my response that I'm not an expert in geotechnical investigations, and so stipulating that sort of a requirement is beyond my scope, so I'm only going off what's obviously in our scheme.

But essentially what it's saying is that when council is considering an application the development, if it was to be supported, should - well, basically - sorry, I'll rephrase that. In considering an application a development

- Q. Yes. So it basically creates a policy standard for consideration in context of risk to life?
- A. Correct.

- Q. If we could go then to page .0755, please.
- A. Would you like me to explain?

Q. Yes, please.

particular scheme.

 A. So I suppose pretty typically for - and I might refer to this as the sort of parent clause, if you like, to the overlay schedules. So this clause would appear in every single planning scheme across the state that would have an EMO. If that particular scheme doesn't have an EMO, this would not actually appear within that scheme in the layout. So you would essentially have to have the schedule in place for that to then actually appear, otherwise it would be kind of pointless sitting there within the context of that

 Because we have six existing schedules, obviously its parent clause is appearing in there. At the top you've got a purpose statement, so obviously that's to protect areas prone to erosion, landslip, other land degradation or coastal processes, minimising land disturbance and inappropriate development. You've got the provision there to allow any schedule below that to have its own objectives or additional objectives, and that might become apparent as we work through this as to why, and a statement of risk.

 Then you've got what the state provisions are for the trigger of a planning permit. So set out there, as you can see, it says a permit is required to construct a building or construct to carry out works including roadworks, domestic swimming pools and any other matters specified in clause 62.02, and I'll perhaps come back to that briefly just to explain why that's important or relevant as well. It sets out what a VicSmart can be in that particular overlay. It also then has the vegetation removal permit trigger separate to the buildings and works, because in the State of Victoria you've got this sort of concept of separating out your relevant considerations, which isn't the same in some other states. So if you're triggering a

permit you can either trigger a permit for use, development or other things, like vegetation removal. So that's fundamentally different to like how some other states operate.

And then perhaps can we go to the next page?

- ${\tt Q.}$ Could I just quickly clarify, for vegetation removal, is that also a state provision?
- A. Correct. That one is, yes.

- Q. Yes.
- A. So this table of exemptions, and I believe it continues on, has all the potential exemptions for vegetation removal within the context of an EMO. Some of these will appear very similarly but not exactly in other provisions of the scheme, so whether it was, say, an environmental significance overlay, significant landscape overlay, vegetation protection overlay, clause 52.17 of the planning scheme, which applies only to native vegetation removal, it has a similar table but if you read the provisions carefully even for something like where they might say perhaps we might go to the next page because I think it might include something like planted vegetation as an example.

- Q. There it is in the middle of the page?
- A. Yes. So, say, where it says planted vegetation here in the EMO, the column on the left may appear the same, but then the conditions in the column on the right may be different for when that exemption applies or not. So it can be quite complex for a --

Q. So you might have something that's exempted from one schedule but not from another?

A. Correct.

- Q. Or one overlay and not from another?
- A. Correct, or even the native vegetation provision or clause 52.17, it might be exempt under the EMO but not 52.17 or the other way around.

- ${\tt Q.}$ Yes. And if we can move on then to --
- A. Sorry, and it might also serve below this table there should be more provisions that are also somewhat relevant.

- Q. Yes. I'm happy to go there.
 - A. Yes.

> 5 6

> 7

8

9

1

Q. Go to the next page, please.

A. So - as I said earlier as well, so the Victorian planning provisions separate out permit requirements, and so in this case as well subdivision is separate. So depending on what you're proposing, so if it's just a development or veg or subdivision, there might be various things you have to consider under the overlay.

10 11 12

13 14

15

16

17

18 19

20

21

22

Then it gives power to a schedule as well. I suppose in addition to these things is to specify application requirements as well, and that will be relevant because I suppose in the evidence given by Mr Paul and Mr Pope, you know, when it comes to considerations if this parent clause doesn't give you the power to consider certain things and the schedule doesn't give you power to consider certain things, then the council actually has no power to consider those, and that can often be a misunderstanding of - people can often think, like, that's council's remit or something without properly understanding the context of the planning system or the planning scheme.

232425

26 27

28

29

30

31

32

33 34

35

36

37 38

39

40

41

It also specifies the exemptions from notice and Review in that context is whether or not you can appeal to VCAT as a third party or as an applicant, but in this case a third party. So applications are normally advertised, but there's certain overlays that might actually exempt that from needing - as an example, you know, you apply for a permit to build your house or extension to a house on your property. If the only relevant trigger is the EMO and, say, not other things like the zone or other particular provisions, this would actually specify - it says, "An application on this overlay is exempt from the requirements of section 52(1) of the Act," and then 64 and 82. That essentially is referring back to the Act, which sets out when and if you should provide public notice, and whether or not you've got appeal rights then. So in this case council would not notify your neighbour of the application and you would have no right to review it.

42 43 44

45

46

- Q. Because it's excluded by this exemption?
- A. Specifically excluded. Then possibly most importantly, but not necessarily, the decision guidelines. So the decision guidelines will appear again differently in

different overlays, and what you've got here is a - and it goes over the page, but you've got a set of things that council must consider if and when this overlay --

Q. Is triggered.

 A. -- is triggered, and I might point out, which again will become relevant, and particularly based on some of the evidence that Mr Paul gave, that the AGS is not actually --

Q. Specifically mentioned, yes.

 A. -- specifically identified here in the parent clause. So unless your schedule in a local provision of the - you know, whether it's the Mornington Peninsula planning scheme or Bass Coast or wherever, Surf Coast or wherever, Mildura, if it doesn't pick up the AGS it's not relevant.

Q. Yes. And, sorry, continue.

 A. Yes, sorry, and just one other thing that I'll point out is that there are some things here that may not be relevant or superseded by virtue that - as an example, there is something there - or a guideline that I think has been updated in more recent times, but where it says "your dam, an asset or liability", you know, there are versions of that document, and so we need to be careful about whether it's referring to an old outdated version or the current version.

Q. Well, it doesn't specify, does it?

A. It doesn't specify. And the only other thing I would probably point out is that because this - and I mentioned earlier about the permit triggers. This overlay is unique in that it calls out clause 62.02-2 of the planning scheme, and that's the State Government provision that may override any other clauses of the scheme, to the extent that you don't actually want to trigger a permit for certain things yourself. So, as an example, one of the things that you can potentially call out is - you know, you might want to trigger a planning permit for a deck as an example.

Q. When you say "you might want to trigger", who is the "you"?

A. The council or the Minister for Planning.

 Q. So an application is made and there's a desire to consider that application against particular requirements? A. Yes, against, say, this overlay but not others.

- 1 Q. Yes, yes.
 - A. However, there's a part of clause 62.02 that you cannot override even with an overlay.

5 Q. Yes.

A. And that's the subclause (1) in that provision versus subclause (2).

9 Q. Yes.

A. As an example, not that it will never be relevant, but that decision guideline relating to dams and their liability may not always be triggered in the first place, and I can explain that later and why I think that is perhaps unfortunate that the State Government planning provisions don't address that issue. But it might be a misconception sometimes in the community because of the drafting of the clauses, and even within planning circles, about when you can or can't consider certain risks like, say - an example - for a dam.

21 Q. And that

Q. And that's because there's a provision in the Act that creates a higher order priority for effectively an exemption to the application of this or any overlay?

A. So it doesn't stem from the Act. It actually stems from clause 62.02.

Q. Of the - okay.

A. Correct. So in a lot of instances, say that - that guide - not the guideline, but it kind of is a guideline, your dam, an asset or a liability, may not actually be relevant because clause 62.02 specifies that a permit is not required for a dam if a licence is required under the Water Act from Southern Rural Water.

- Q. Yes. So it takes it out of the hands of the council completely?
- A. It takes it yes, correct. And so even if a dam was proposed on the side of a hill like this, potentially it's not within the remit of council to consider it despite the EMO suggesting that there is a consideration.

- Q. Yes. And that's not unique to the Mornington Peninsula Shire?
- A. It's not. It's statewide.

Q. Yes. And it's the state that controls the inclusion of that clause?

1 2	Α.	Correct.
3 4 5 6		Yes. And is it also the state that controls the usion or otherwise of these decision guidelines? Are uniform against state These ones are, yes.
7 8 9 10	Q . A .	Victorian EMOs? Yes.
11 12 13 14 15 16	were You r A. know	And are you aware of when these particular guidelines last considered or any amendments to them were made? may not be, but Look, I could probably give an indication. I don't, in short, exactly when, but each clause there or lause has a date next to it on the left-hand side.
18 19 20 21 22 23 24	And s	Yes. And so each of those subclauses can potentially be ed at different times without affecting the others. so as you can see, VC229, as an example, last updated se 44.01-8, the decision guidelines, on - is it /2023? It's a bit blurry.
25 26 27 28	-	Yes. Yes, 20/3. But, if you go up to the application irements or the subdivision permit trigger, the last that was touched was VC146 or 148, sorry.
29 30 31 32	Q . A .	In 2018? Yes, in 2018.
33 34 35 36	Q. to th A.	Yes. Thank you. And so the - there are six schedules his EMO? In the Mornington Peninsula planning scheme, yes.
37 38 39 40	of they time	
41 42	Α.	
43 44 45	state	With the earliest one being, you say in your ement, some time in the 1970s, in a predecessor form, sume?
46 47		Correct, yes. So it would have been pre-current ning scheme and pre-amalgamation of the things. So,

- Q. Picked up and put into the right spot in the current scheme?
- A. Correct.

13 14 15

16 17

12

Q. And if we can turn to page 0764, please. This is schedule 4 to the EMO. So schedules 4 and 5, you state in your statement, were introduced some time in January 2011? A. I believe that's correct, yes.

18 19 20

21

- Q. And they apply to the area in the vicinity of Tanti Creek and Flinders?
- A. Correct.

222324

25

26 27

28

29

30

31

32

33

34

35

36

37

38

39

40

41 42

43

And are you able to explain at a general level how Q. these EMO schedules differ from schedules 1 through 3? Effectively the schedules sort of 1, 2 and - or 3 is an example as well. 1 and 2 in particular I suppose are the older remnant sort of ones, and there's - from what I can understand and from what we can gather, have been implemented quite a long time ago, and perhaps when they've been put into the current version of the planning scheme, if you look at their schedules, where that parent clause that we were talking about gives it power to do certain things, like have its own objectives or purpose, a statement of risk, additional application requirements, decision guidelines as well, and call ups and things, the EMO1 and 2 basically don't contain any guidance or any additional information requirements whatsoever. So to that extent I would say they're probably not a great tool for a planner or an engineer or whoever's considering the application to - other than the state control - give consideration to what the person who implemented it was thinking at the time and to what the relevant risks are to consider.

44 45 46

47

Q. Yes. So is it fair to say that what those EMOs have been - what they effectively do is just apply the parent

- 1 clause to a given area?
 - A. Correct, and then may add more to it. So I'm not sure if maybe we can bring up the --

- Q. Yes. Which would you like?
- A. I think it might be good to show the 4 and the 5.

Q. Yes, sorry, yes, 4 and 5 we're definitely going to go to. That's at 0764 of that document.

COURT OPERATOR: It's a large document.

MR DI STEFANO: That's okay. No worries.

WITNESS: About 1,300 pages, I think.

MR DI STEFANO: I had to reduce PDF size on my iPad. So if I could just, while we're getting that up, jump ahead a bit. 4 and 5 - schedules 4 and 5, that is - explicitly refer to a quantitative risk assessment in accordance with the AGS guidelines?

A. I believe that's correct, yes.

 Q. Yes. And that quantitative risk assessment is not required in any of schedules 1 to 3 or schedule 6?

A. Technically that's correct, yes.

Q. Technically. And by "technically" I assume you're caveating based on the informal practice of applying or requiring that in circumstances where there's a high susceptibility on the GIS data?

A. That and not just that perhaps, and I'm sure we'll obviously get to that point.

Q. Yes.

 A. But I caveat that because, yes, if the schedule doesn't specifically call out that sort of a requirement, I suppose what you're leaning on or referring to then is that parent clause that we were discussing. So it does have application requirements.

Q. Yes.

A. And, to the extent that it might require a report to be submitted or council to consider certain things, arguably a planner or an engineer, whoever is assessing that application, would potentially still be able to ask for the same information even if it's not specifically

- Q. Yes. So say you have a property that doesn't fall within EMO4 or 5 and the council planner, for whatever reason, requests it might be the 2012 GIS data or otherwise, requests a quantitative assessment, what is the source of power for them to do that, if not what's contained within the schedule?
- A. So I think unfortunately it's probably a complicated answer, but I'll try and summarise it as best I can. Essentially what you'd be leaning on is the application requirements and decision guidelines of the parent clause, clause 44.01.

- Q. Yes.
- A. And that's irrespective of whether we had a land susceptibility layer in our GIS separate to that, and I'll give an example as EMO1 is an example. Because it is quite an old layer, actually my understanding is, and this is in the Cardno 2012 report itself, it spells out that that data is quite old, we're not actually sure of we think it's based on three previous geological maps of the area that are very sort of large scale, if you like, so there's a lot of margin for error.

Q. Yes.

A. And so those layers, the EMO1 and 2 as an example, probably more EMO1, has limited accuracy anyway, if I can, like, kind of say that in general terms. And I can explain and perhaps I could show you how that works --

- Q. Yes, we'll get a map up at some point which shows those --
- A. Yes. How they intersect.

Q. I understand your point, they're just broadbrush? A. Correct.

A. Correct

- Q. They apply over an area irrespective of within that area what you would infer would be different landslide susceptibility?
- A. Correct, yes. And then I suppose with the EMO4 and 5, yes, they specifically call that out because they've had a study that was conducted. I believe those ones were around

- 1 2007 or 09, off the top of my head.

- Q. Yes, it says 2007 in your statement?
- A. Yes. So because there was a sort of more I wouldn't say site specific, but more region specific than a whole of shire sort of analysis done, that modelling and, you know, the assumptions that we heard from both experts over the last couple of days goes into more detail and is based on the more sort of factual evidence of that specific location or region, so again along, say, a creek line corridor.

- Q. Yes.
- A. So obviously that would be, again in my opinion I'm not a geotechnical engineer, but that would be a more accurate basis for determining applications because they can more closely look at the local variations in things like groundwater and whatever else that the EMO1 and EMO2 perhaps didn't consider.

- Q. Yes.
- A. And similarly, you know, the experts, as they say, like, even with the 2012 model, it's based on a number of assumptions and extrapolates data information, and some of that is it explicitly excludes consideration of water tables and things like that, so yes.

Q. Yes, we'll definitely get to that. A. Yes.

- Q. If we can just have page 764, please, 0764. Thank you. So this is schedule 4 to the EMO. I don't want to kind of flick back through pages because I'm worried about what I might do, but the previous three schedules have
 - significantly less detailed requirements?
 A. Correct.

- Q. And you can see there under "Application requirements" that there's a specific list of effectively documents that are required in satisfaction of the authority, which is the shire, which include a site-specific geotechnical hazard and risk assessment report?
- 42 A. Correct, yes.

 Q. And then if we can go over the next page, please. The first level of dot point on the next page is a geotechnical hazard assessment, and then the third dot point on the next page, and I'll just read it, is, "If any of the land is

also affected by EM05, a quantitative risk assessment of the site in accordance with the 'Practice note guidelines for landslide risk management', Australian Geomechanics Journal, volume 42, No.1 ... procedures for loss of life and either quantitative or qualitative for property loss." So that's the 2007 AGS guidelines that we've been discussing?

A. Correct.

8 9 10

Q. And a requirement that there be a quantitative risk assessment against that?

A. Correct.

12 13 14

15

11

- Q. And that only applies where a part of the land is also affected by EMO5?
- A. Correct.

16 17 18

19

20

21

22

23

24

- Q. So where it says "if any of the land", is that any of the land that is to be developed?
- A. Well, I think by yes, by reference to, you know, as we said earlier, like, these things can apply to just part of a lot or land, then I think, yes, it has to be read in the context of it only applies to that part of the land that is within the EMO4 or 5, not the other parts of the land.

252627

28

29

- Q. Yes. And so you in your various roles at the shire would have been the planning officer for applications like this?
- A. A while ago, yes.

30 31 32

33

34

Q. And who is it that - once you receive that quantitative risk assessment, who is it that within the shire looks at it and gives a view about whether or not it's satisfactory?

35 36 37

38

39

40

41 42

- A. Generally speaking so as was sort of touched on the other day that council has lots of internal services and expertise, and in some instances we don't have the expertise in-house, but generally most councils will have a development engineering team, and so an application would be referred from the like, the assessing officer to the engineering team, who have more experience and understanding of these things. But where it affects I suppose matters such as this where it's a very
- I suppose matters such as this where it's a very specialised engineering field within the engineering
- discipline, as we've heard from the experts, there may be
- 47 an instance where that particular shire or even city

1 2

> This is the peer review? Q.

6 Yes, so there's I suppose two components there. Council could essentially hire an external expert to come 7 8 in and give that advice as well, or there is the option to have a peer review system where the council says to the 9 applicant saying, "You go and get the geotech engineer for 10 this plus an independent peer review that you also fund 11 essentially and provide that to us," and there's 13

12

essentially a double-check of that because council may not have that in-house expertise.

14 15 16

17

18

Q. So the EMO, it applies additional conditions and creates the requirement for additional documents to be submitted in satisfaction of those conditions? Yes. correct.

19 20 21

22

23

It also, though, requires applications in certain circumstances where otherwise an application wouldn't be required?

24

Α.

Correct.

25 26

27

28

29

So could you give an example of where someone might be proposing to do some works on their property, they might talk to a private town planner and say, "Do I need a planning permit," and be told, "No," but if an EMO had applied they would be told "yes"?

30 31

Yes. Probably many different examples of that.

32 33

34

Q. Yes.

40

41

42

industrial, residential, commercial. The zone itself does not give consideration necessarily to the EMO or any other So they could specific overlay, like flooding, whatever. come to council or a private consultant and say, "Do I need a permit to construct this building on this zoned land," and they could say, "No, because the zone itself doesn't trigger a permit," and if there's no other overlays then there's no trigger and you proceed to a building permit stage.

One as an example could be any - pick any zone,

43 44 45

46 47

So, for example, if someone, say, wanted to construct a low deck on their property that may in one circumstance not require a permit, but if it was covered by an EMO it

- 1 may require a permit?
 - A. It may require it, and this is probably where clause 62.02 becomes relevant and the parent clause of the EMO, 44.01, is that unless that schedule calls that out, like a deck, and specifically a deck with a, you know, floor area that's less than 800 millimetres off the ground --

- Q. Yes.
- A. Unless it specifically calls that out, if your deck was even 900 millimetres above ground level or, you know, two and a half metres above ground level, it may not trigger it because depending on what the zone is, if you don't have an overlay to cover it and specifically require that, then it wouldn't be relevant.

Q. Yes. And what about for a retaining wall?

A. So there's numerous other provisions of schemes that can trigger for earthworks as well or retaining walls. So it's not necessarily the case it wouldn't trigger a permit anyway, and these examples do exist on the peninsula but in other schemes across the state too. So as an example here, and if we use, say, 10-12 View Point Road as an example --

Q. Yes.

A. -- there's not an EMO applying to the land, but the design and development overlay 3 or schedule 3 to our planning scheme can take the permit trigger for various things, works on, like, sloping land and also where there's a difference in finished land - floor level of the land greater than a metre.

So even though, say, a DDO arguably isn't the right

Q. Yes.

control for erosion and sediment control, inevitably it is in the scheme there. Another example might be environmental significance overlay, schedule 25, which also applies to that land, and it's got a broader brush trigger where essentially everything triggers a permit unless it's exempt in the schedule, where some of these - like I said, the parent clause might have its own exemptions before you get to the schedule. So the ESO25 in this instance could also be considered to trigger a planning permit. So, yes, it won't always be the case that simply because there's no

 ${\tt Q.}$ Yes. So to use the 10-12 View Point Road example, if

EMO there is no trigger and there is no consideration.

- the owner of that property had gone to a private town planner and said, "I want to build a retaining wall that's 900 mm tall from ground level, do I require a planning permit," if there was an EMO applying to that property the answer would have been yes?
 - A. I think it's maybe, because it depends on what the EMO schedule said, I think.

9 Q. Yes.

- A. And similarly in that example the ESO25 would still I think could I would have to have a look at it, but --
- Q. Yes, I understand. I'm asking you a detailed -- A. Yes, correct.
 - Q. A hypothetical with too much detail, yes.
 - A. No, it's okay. And I think that, say, the like as an example there, if you said it's a 900 mm high retaining wall, and the follow-up questions would be, "Well, but are you exceeding behind that," because, again, it might be relevant, not just the wall but the area around it --
 - Q. What the ground level is.
 - A. If you were battering and the batter became more than a metre off the existing ground level, then the answer still could be, yes, you're triggering a permit because of the fill.

Q. Yes.

- A. Not so much that. But in the ES025 that qualification doesn't exist. So off the top of my head I'd say that maybe the ES025 still triggers a permit for that.
- Q. Yes. So ES025 and the other, you say, vegetation removal overlays, they might be triggered. But those overlays aren't specifically designed to accommodate for landslide or landslip risk, and if they did trigger they wouldn't then activate the powers under the EMO to require additional documents in conformity with the EMO; is that fair to say?
- A. Again, because it's quite a general statement and --
- Q. Yes. Well, maybe I'll break it down. So those other schedules, they're not designed to deal with landslide or landslip risk?
- A. Primarily, no. However and, again, rightly or wrongly, some of these schedules are quite dated. So

again, on the peninsula you've got schedules that predate 1 2 the current planning scheme from, you know, 3 pre-amalgamation of mashing things together. So. as an 4 example, the DDO3 or other DDOs may have what under current practice wouldn't be included in a DDO, but there are 5 6 remnants of the old scheme. So they will still potentially 7 consider in the decision guidelines the risk of erosion, and so by extension I suppose the risk of erosion could 8 So I think if you've got a DDO like we 9 lead to landslip.

do in this case I don't think it's fair to say --

- 11
 12 Q. That there is no consideration?
 - A. That there is no consideration, correct. And the ESO25 similarly also has that in its decision guidelines. It also has --
- 16
 17 Q. Erosion specifically?

10

13

14

15

18 19

20 21

22

23

24

25

26 27

28

29

30

31

32

33 34

35

36

37 38

39 40

41

42

43

- A. Correct, and in the objectives and we can go to that if you like or I can point that out --
- Q. No, no, I understand that point, and I think it's useful context to understand how the EMO fits within these other overlays?
- Look, there might be other there's not just Yes. These are the ones that I know of, but, as an some. example, where councils have the land subject to - not subject to inundation overlay or flood overlay, right, it's for a different purpose. But if you look at the reasons for why a permit is triggered or the objectives of that clause, and then you look at the decision guidelines, it does call out erosion in streams or along creek lines, because obviously the impact of water flowing through those streams and creek lines, if you were to remove vegetation or do works in the area, yes, the primary concern is probably is building in that area appropriate or not. However, secondary to that, and probably just as importantly, what impact does that have on erosion and landslip risk. It might not specifically say "landslip" or "landslide" --
- Q. Yes, I understand.
- A. -- but by extension --
- 44 Q. Might incidentally affect that?
- 45 A. Correct.
- 47 Q. But in that same sense so could any form of planning

A. I think, again, the answer is difficult, like, it's complicated, and I think it's changed in - in terms of context and time. Up until very recently I would say the answer is yes. And the reason it's complicated is because in Victoria you've got a long line of decision-making and perhaps until more recently clarity around if a permit is triggered under, say, multiple overlays or multiple provisions of the scheme - there's a decision of VCAT and Supreme Court decisions that sort of suggest that in terms of integrated decision-making, if you've got multiple permit triggers, then as a combo you can consider things that are more general - general in nature when you're considering that application.

So, as an example, in 10-12 View Point Road if you've got the DDO and ESO, as an example, triggers a permit and you've also got the general residential zone vegetation protection overlay, if they've all triggered a permit, or even some combination of them, and the proposal was not necessarily complex but appeared to require consideration of broader things, it would be fair to say that, yes, you have power to ask for consideration of those matters.

Q. So you're in effect shoehorning into another more general requirement the specific - in the example I'm giving, the specific requirement for a quantitative risk assessment based on --

A. Correct.

 Q. -- a line of best fit between multiple overlays; is that --

A. Correct. And it's not until more recent times where last year there was a change in the planning and environment regulations which accompany the Act itself, and the State Government chose to - and I think this is probably a good move; it's again just an opinion - but clarifies what particular provisions of the scheme trigger a permit and what was the consideration and sort of, I suppose, narrows the attention of the decision-maker to those matters. And that I believe - and, again, there could be various reasons for why that has happened - but, again, there were multiple decisions of either VCAT or the

Supreme Court where that was in debate about what is within consideration and what's not. And one of the examples is an oil pipeline. There is no overlay for risk assessments for oil pipelines, as an example. But an objector who owns that pipeline and that asset objected to a development next door on the basis that the risk is too high for the occupants of that development because of the pipeline or gas - oil pipelines. And that might be the case.

But if the permit is being triggered, say, just under the general residential zone, there is nothing in the general residential zone to say that that is a relevant consideration to the decision-maker or for the objector to actually appeal it in the first place. Obviously that is played out in the courts to actually consider whether or not it is relevant. And because of this more recent line of decision-making that kind of says, "No, the decision-maker is more confined," I suppose and now with the State changing the regulations to specify that, probably in more recent times the answer might flip to, "No, it's not relevant." But I must stress that that's only the last part of 2024 that that's occurred.

- Q. Yes.
- A. In more recent times there have been other changes to the planning scheme, not the Act or the regs, that also might limit that consideration.

- Q. Yes.
- A. So there is a change in, I suppose, context that may be very relevant.

Q. Yes. So, perhaps to try to summarise what's been a very useful but quite detailed discussion, where EMO5 or 4 don't apply but a decision-maker within a planning - a statutory planner requests a quantitative risk assessment or wants to request it, they may have power based on a general clause within another overlay --

- Q. -- to request something akin to that?
- A. Correct.

Correct.

Α.

- Q. But it's also fair to say that it would be effectively within their discretion to form the view that they need to and then to ask for that?
- 47 A. Correct.

4

- And that would also then, as a natural corollary, be subject to the applicant pushing back on that and saying, "Well, where's the power?"
- Correct.

5 6 7

8

9

- Yes. And are you aware of instances where applicants have pushed back against the requirement for a quantitative risk assessment?
- Well, not just that but in anything we request.

10 11 12

Q. Yes.

Authorities often request information under section 54 13 Α. 14 of the Act when they're assessing a planning permit, and often there will be push back from an applicant not just on 15 that but on many other things. 16

17 18

19 20

- And is it fair to say in your experience that the more costly and onerous a requirement is the more likely someone is to push back on it?
- Correct. Α.

21 22 23

24

25

- And is it also fair to say that the quantitative risk assessment probably falls at the higher end of that scale in terms of onerousness and cost?
- Α. Generally, yes, I think.

26 27 28

29 30

31

- Q. In terms of the EMOs, the six EMOs, just to round off on this kind of general part of the discussion, it's fair to say that they've evolved. The shire has six EMOs by evolution, not design?
- Α. Correct.

32 33 34

35

36

And it's not part of a broader strategy that the shire has formed the view that having those six EMOs is the best overall practice?

I think it's a difficult thing to say. 37 I think 38 I would have to speculate as to what predecessors, not just 39 of mine but directors and things over time have considered is reasonable and relevant to that consideration. 40 yes, they have evolved over time due to reports or even 41 42 State Government data as an example.

43 44

45

- In a sense, to be fair to you, the 2018 and 2023 Q. reviews both recommend or effectively are a reconciliation of all of the EMOs.
- 47 Α. Correct. They do.

 Q. So the answer is in the documents. Are you able to just briefly explain what the process is for amending a schedule, in particular an EMO?

A. Yes. So I suppose at a very high level, and I touched on that earlier about how a planning scheme amendment might be changed and obviously there's different authorities that can - or even a private developer can do it. In the council context if council was to lead that planning scheme amendment process it would generally as a first step start to prepare the documents that are required for that planning scheme amendment. And, again, they vary because it could be the text or it could be text and maps. So you would generally start preparing it. But you would also want to have certainty around whether or not the minister is going to - the first step is the authorisation of that. So you would need to seek authorisation to prepare the planning scheme amendment.

Q. From the minister?

A. From the minister, yes. And, again, the minister can say "yes" or "no". And the preparation of that - I don't want to oversimplify it either, but there's many, I suppose, relevant - there's a ministerial direction or guideline, if you like, that stipulates what authority must include or they do in order to get to that point. You can't simply approach the planning minister on a whim and say, "Hey, can we proceed with a planning scheme amendment?" They will say, "No, show us the form and content of what you are wanting to do and why you are wanting to do it." And that would apply similarly to a developer or other authority leading that.

So, if you get authorisation to proceed, normally you would go then to preparing the documentation and all of that stuff, like, further because, again, you may not have done all of the work required. And then you would essentially seek in this case generally - not generally. At Mornington Peninsula Shire we would always go back to the council to seek not just the approval to seek authorisation but then also to go out for exhibition to the community. And the caveat there is that, if you seek to exhibit the documents, that's kind of the more general rule, but the Minister for Planning can exempt the requirement to exhibit a document or documents that lead to a planning scheme amendment, and it can exempt themselves as well and all sorts of things. So exhibition is probably

5

6

7

8

9

10

11

12

13 14

15

16

17

1

And so if you go to exhibition and you get objections or submissions, if you can't resolve those objections or submissions you would then normally - you would try to But, if you can't, you would generally resolve them first. go back to your council and the Minister for Planning and seek appointment of a panel, like a professional planning panel, through Planning Panels Victoria. And they would have, I suppose, a semi-formal style hearing, similar to VCAT but for planning scheme amendments. And they would then provide recommendations, essentially, to the council and to the Minister for Planning about whether or not the proposal should proceed in its current form or whether it requires changes and everything. It would also take into consideration anyone that wishes to be heard that submitted objections or anything to it.

18 19 20

21

22

23

24

25

26 27

28

29

30

And then, following that, it would go back to council. Once the panel gives its recommendations, it would go back to council for consideration. If the council sought to adopt a position - and that could be either, again, adopt all of the planning panel's recommendations or make some or none - they can either choose to abandon that, like, planning scheme amendment or they can seek to ask the minister to adopt that. So they've essentially adopted a position at that point. And at that point it becomes a seriously entertained planning scheme, even if it then sits with the minister indefinitely. So then, ultimately, the minister is the decision-maker at the end of the day.

31 32 33

34

35

36

37

38

39 40

41

- Q. And is the minister's decision to amend an overlay subject to any kind of appeal right? I mean, maybe that's a question beyond your scope.
- A. I could try to answer it as best I can. So generally speaking, no, there is no appeal right to that or no High Court. However, there has been a challenge before. I'm not sure if you have ever heard of Winky Pop as an example. That was more around not following natural justice principles and whatever else or prejudicing the decision on that at a council level.

42 43 44

Q. Likely we won't have to deal with that.

Hopefully not.

45

46

47

Q. So specifically in respect of EMO schedules 4 and 5

Α.

what would the process be for the council? You've outlined it now at the high level. So for EMOs 4 and 5 what would the process be to extend the area of application to all of the high susceptibility areas within the 2012 GIS data? I suppose I think, with respect, I probably want to clarify that as well. I don't think it would be a matter of extending the EMO4 and 5, primarily because they are based on, like I said, more location specific studies. It's not to say that you couldn't look at them again and Obviously the study that informed them was change them. But I tend to think that, again, subject to a review 2007. by a qualified professional and advice around landslip risk, perhaps you wouldn't amend the EMO4 and 5; you could just leave them as they are.

But what you would probably want to do is re-examine the rest of the shire and see whether or not changes are required there. And, again, the reason I say that is because, as we heard from some of the experts and is in the Cardno 2012 report as well, there's a recommendation to potentially update that mapping every five to 10 years to keep currency. But I think that also depends on what went into that study in the first place and informed it. So if there hasn't been any variation to the factors that went in to informing that then there possibly is no need to review the 4 and 5.

Q. Yes. But assume as a premise to my question that it had been decided that the application of conditions like EM05 --

A. Yes.

Q. -- were to be applied to all of the area that was high susceptibility in the 2012 mapping, what would the process be? It's the same process as you've just outlined?
A. Correct, yes. You would have to go through that planning scheme amendment process.

Q. So you would have to approach the minister? A. Yes.

 Q. Get the provisional permission to begin the work. The preparation of the documents would presumably be much quicker because you would have the mapping and you would have the controls already in the schedule?

A. Look, I think there's the very difficult question again around, if we were to simply go to the minister now

10

11

12

13

1

3

4

5

6

Q. No, I understand your point. Your point is the requirements would be the same but perhaps you would hit roadblocks based on the lack of currency of the -- A. Well, perhaps not just the currency but even the accuracy of that overlay itself and the assumptions it was based on at that point in time.

14 15 16

17

18 19

20

21

22

23

24

25

26 27

28

29

30

31

32

33

Q. What about interim or emergency extensions? So I think this is something that council has been, I suppose, in more recent times investigating to apply an It may have I think slightly more chance interim control. of success of being applied as an interim control, but even that I think is contingent upon whether the minister thinks that that would be appropriate in the circumstances. again, I caveat that one because we wouldn't be the ultimate decision-maker there as a council but also because, general speaking, if they apply an interim control they would probably do that - using a different example, if you wanted an interim heritage control you would probably or possibly have already done some work to inform that heritage provision. And the purpose of seeking the interim control would be to make sure that between the time it takes to actually do the study and then get a proper heritage overlay in place someone can't just go and knock down a heritage item.

34 35

36

37 38

39

40

41 42

43

Q. Yes.

A. But you would have to have some level of preparation and work done before they'll grant you the interim control. So generally speaking - and I don't want to say, like, always or whatever but, generally speaking, I think the Department of Transport and Planning and the minister would give you advice to say, "Unless you've got a reasonable basis for applying that interim control, which almost informs the permanent control to come later, then it may not be appropriate."

44 45 46

47

Q. Yes.

A. And we've got other examples on the peninsula like

- Q. I noticed that schedule 6 was added in 2025, although when I reviewed the schedule itself it appears that work on that started in 2019. Is that kind of six-year timeframe typical for how long it takes to add an additional schedule to --
- A. Again, difficult to answer, but probably for some added context there, yes, that may C271 I believe you're referring to is the planning amendment for EMO6.

- Q. Yes.
- A. So that only came into effect in Jan 2025. And, yes, I believe it started in 2019. For added context, that is based on data or evidence that is State Government data around sea level rise and everything that's applying to the Western Port side --

- Q. Yes, it's coastal.
- A. And that is actually data from 2014. So it's taken from 2014 to 2025 to implement that in full, from start to finish.

Q. I think it's now worth turning to the GIS data. Can I have document MSC.5012.0001.4440 brought up, please. This is a big PDF so hopefully it doesn't cause any heartache. So this is the source of the 2012 GIS susceptibility information?

A. Yes.

Q. And if we can scroll to page 3, please. It's 4442. So the second paragraph reads, "The assessment recommended that the maps be combined with a review of numerous consultants' reports to enable the development of a map that classifies the shire into areas of high, medium and low landslide susceptibility. Since the release of the initial report there have been significant improvements in the available GIS data."

 The next paragraph, "The study was then expanded to make use of the newly available photogrammetric digital data, review and include the council and consultants' reports, produce a database of slope failures and generate a landslide susceptibility map and scope of geotechnical investigation for the shire." So I'm right in summarising that the purpose of this report was to develop a shire-wide

Q. And the approach taken - and I'm going to attempt to summarise it and, if you're unhappy with my summary, we can go through the individual details - was to effectively establish a landslide model or a landslip susceptibility model which took into account the orientation of a slope, the angle of the slope, and the particular rock or soil, the geology of that slope, and then to analyse known landslides and develop a probability analysis effectively based on those three variables of landslide susceptibility? A. Yes.

Q. And then using the shire-wide dataset on those three variables effectively plot which areas are red for high susceptibility, which areas are green for medium susceptibility - I think I'm getting the colours right.

A. Yellow for moderate and green for --

Q. Yellow for moderate. My apologies; you're right. That's roughly correct?

23 A. Yes.

Q. As far as you understand it?

26 A. Yes.

Q. And once the model was developed then that was verified against - it back-verified, in a sense, against the areas of known landslip and sites of known landslip to reverse engineer the accuracy of the assumptions built into it?

33 A. Correct. Yes.

Q. If I can have page 4445, please, be brought up. So at the bottom of this page it has the conclusions, and it says in the second paragraph there, "The study does not eliminate the need for geotechnical investigations for each site, and an individual landslip risk assessment will be required for a proposed development. An appropriate geotechnical investigation by an experienced geotechnical engineer or geologist may override the landslip susceptibility determined from the GIS." So, effectively, it's general data that requires specific analysis for a particular application in a given area?

A. Correct.

And then it goes on to say that the modelling is based on geology primarily, but that other factors such as the depth of groundwater, the presence of a perched water table, vegetation and the depth of rock weren't able to be considered and that "if there is shallow bedrock" - I'm reading from the second last line - "in the area of a landslip, the susceptibility assessment is likely to be Conversely, if there is a perched water conservative. table or shallow ground water the predicted landslip susceptibility zones may underestimate the landslip susceptibility."

A. Correct.

 Q. So it's acknowledging its own use of a fairly - a heuristic based on these three variables and the need for individual data analysis?

A. Correct.

Q. This wasn't the first or only landslide susceptibility analysis prepared for the shire. At page - and we don't need to go to it, but at page 4471 there's references to earlier analyses, and you're aware that's in your evidence? A. Yes.

Q. And they were taken into account in the purpose of preparing this. Page 4479 defines a high susceptibility zone, what that means. If we could have that brought up, please. The short point is the definition is an area where significant landslides are possible, and it goes on to say that it may be due to other - the various variables. I actually don't think I need to read that out.

A. That's okay.

Q. So can we go to 4515, please. Sorry, if we go to just the page before, 4514. I just want to do this before we go to the break, if we can. 4514, please. The page starts halfway down the page there's a heading that says "McCrae". So just the page before that, please. Yes. So this begins the analysis on the McCrae area and says, "The cliffs at McCrae have been shown to be unstable in the past due to both natural and manmade causes." It refers to an earlier study in 2007 that's in your evidence.

A. Yes.

 Q. And then if we go to the next page, please. There you'll see the susceptibility analysis for the McCrae area. A. Part of it, yes.

- Q. Part of it.
 - A. Yes.

- Q. That's true. And we have a better quality well, Mr Oz's statement included a close-up image of what I understand is the GIS data that you have access to within the council.
- A. Correct.

- Q. That's in effect the export of this data.
 - A. Correct. I'm aware of what's in his statement.

- Q. Yes. So you can see there the subject site appears to be half well, the slope itself appears to all be coded high susceptibility, the escarpment?
- A. Yes, look, I would say, yes, generally, although I mean, I have looked at not just here but in other areas around whether or not that red area aligns with LiDAR contour levels, and invariably in places it doesn't where you might actually have the cliff edge, and it might be saying the yellow area or even, I suppose, the green, which implies low susceptibility, and so the mapping itself needs to be treated with a level of caution again probably because of some of those qualifying factors within the report itself around the scale of the mapping that's been used to inform it. So if you follow where the areas of red are they don't always necessarily align with the steepness of the land or, like, a cliff edge.

Q. Yes. And I think that may be a function of the resolution of the LiDAR that was used for this particular mapping.

A. I tend to think it's more a factor of the underlying geological maps that inform and are overlaid with other data. The geological maps are a scale of 1:63,000, which is about 1:630 metres.

- Q. Yes.
- A. And so --

- Q. One millimetre movement on that map could be a 10-metre difference.
- A. Correct, yes. So, in effect, it's probably that rather than the LiDAR that's inaccurate, because the LiDAR is accurate to in this case probably plus or minus I think 10 centimetres.

(3)

.09/05/2025

Q. Yes.

A. In some cases even more accurate, and that's acknowledged in this report. So where there are differences of that data I tend to think that it's the other data that's of not of a greater scale or clarity than the LiDAR.

MR DI STEFANO: Yes. Chair, is that an appropriate time?

CHAIRPERSON: Mr Simon, have a 15-minute break. We'll be back at 12 o'clock.

A. Sure.

SHORT ADJOURNMENT

MR DI STEFANO: Thank you. Mr Simon, I'm going to try to be a little bit quicker for the next 30 minutes or so, and that's not meant to be in any sense a criticism of you. It's been a very useful discussion. I think it's really useful for the board to understand. But can I take you to paragraph 67 of your 11 April 2025 statement, which is MSC.9000.0001.0002, at page 25.

Now, when this statement was prepared - maybe I'll withdraw that. The data that we were just looking at, the draft report, was provided as an annexure to your 17 April statement?

A. Correct.

- Q. In your 11 April statement you said in evidence, "It is my understanding that the Cardno 2012 GIS assessment did not look at the likelihood (or probability) of landslides, or landslips or the severity of landslides or landslips in the McCrae area." Is that still your evidence?
- A. In short probably no in that I think based on what we have sort of discussed it does look at likelihood to some extent, and perhaps it's more need clarification I think in that if, it does look at the probability, that it may not accurately reflect that probability.
- Q. Yes. And is that to do with what you said earlier about the topographical lines not necessarily matching up? A. Well, to some extent, yes.
- Q. And also to do with the kind of nature of the dataset and the rules that were used and the limitations that were

- 1 explained in the report? 2 Α. Correct. 3 4 Yes. I understand that. 0kav. I want to talk 5 briefly about the reviews that were conducted which 6 recommended a revisiting of the EMOs. I don't think we 7 need to go through them in detail. You've explained them 8 in your 17 April statement at paragraph 72 onwards. in short, in 2018 there was a review of the Mornington 9 Peninsula planning scheme. 10 11 Α. Correct. 12 Were you at the shire then? 13 Q. 14 Α. No, I was not. 15 Q. So you weren't involved in any way in that review? 16 Α. 17 No. 18 19 And that review recommended, for the transcript at Q. 20 page 0206, that there were updates to the EMOs? 21 Sorry, can you help clarify that? Α. 22 23 Q. Yes. 24 Α. Updates from 2018 do you say or --25 26 The 2018 review recommended - it's at paragraph 74 of Q. 27 your statement --28 Α. Sorry, it's not showing. 29 30 Q. Sorry, if we can go to paragraph 74. I'm sorry, this is paragraph 74 of the 17 April statement. 31 32 Α. Yes. Okay. 33 34 Sorry, this is the wrong statement. It's the 17 April statement, not the 11 April statement, that I'm talking 35 I don't have a doc ID on my version. 36 about. If that can
 - Q. Sorry, this is the wrong statement. It's the 17 April statement, not the 11 April statement, that I'm talking about. I don't have a doc ID on my version. If that can be brought up. I can read it to you. It says the recommendation from 211 of the 2018 review was, "Complete the comprehensive review and update the shire's landslip susceptibility data and modelling and update the ordinance and mapping of the shire's EMOs." You weren't involved in that review, though. So I'm just adding that as context. A. Yes.
- Q. So that recommendation wasn't it had an estimated timing of 2021 or so as the desired completion date of it?

 A. That's my understanding, yes.

38

39

40

41

42

- 2 Q. And in 2023 there was a subsequent review?
 - A. Correct.

- Q. And you were at the shire then?
- A. I was.

6 7 8

9

10

- Q. Were you involved in that review?
- A. Not directly in terms of not preparing it or doing the assessment of it. That obviously sits with the strategic planning team.

11 12 13

14

15

Q. Yes.

GIS data?

A. But, yes, I suppose my team being one of the key teams to have input into it, yes, we would have been directly involved.

16 17 18

19

20

21

22

23

24

25

26 27

28

I understand. At paragraph 75 of your statement you Q. note that review - I have the doc ID here now for the It is MSC.9999.9999.0002. 17 April statement. The 2023 review noted that recommendation 211 hadn't been carried out, and at paragraph 25 of your statement, "Strategic work is required to undertake a comprehensive review and update the shire's inland landslip susceptibility data and modelling. Following this review an update of the ordinance and mapping of the environmental management overlays will likely be required. This work is yet to be funded, resourced or programmed." Are you aware of whether or not the drafters of that review were aware of the 2012

29 30 31

32

33

A. In short, no, I'm not sure if they were aware. I assume they would have taken into consideration any other, you know, information that they had available to them at the time. But, no, I can't speak on their behalf.

34 35 36

Q. And are you aware of whether they gave any consideration to the 2022 landslide?

A. To my knowledge, no.

37 38 39

40

41 42

43

- Q. Recommendation 211 in the 2023 review is given a medium priority as its priority. Are you aware of what the process is of determining the prioritisation of various of the recommendations in the 2023 review?
- A. Not directly. And, again, it's probably more a question of, like I could offer an opinion or perhaps speculate. But I'm not sure if that would be --

6

7

8

9

10

11

12

13

14

15

16

17

18 19

20

21

22

23

24

25

26 27

28

29

- Q. But I think you can give an opinion in your experience to the extent you're happy to.
- Look, I think the categorisation of what is prioritised with a sort of low, medium or high in that context I think would be dependent upon what other work the strategic planning team is also doing at that time, what are the resources or funding available to do any further work, and potentially again factors such as what's relevant to risk or other things. So, as an example at the time, they were preparing planning scheme amendment C219 and also So, once they've I suppose put various other overlays. those in train, as I mentioned earlier with the planning scheme amendment process even though it's not probably tight on timeframes like the assessment of a planning permit there are still timeframes involved. So. as an example, if you already had three or four other amendments under way you wouldn't be able to just simply cease doing those amendments even if you thought it might be best to cease them and divert attention to other ones, not necessarily saying the EMO in this case but any other one, because you would run the risk of having those amendments be deemed to be abandoned or lapsed, and so you would potentially waste years and years worth of strategic work simply because you haven't continued through with the resourcing and funding of those already under way planning scheme amendments.

30 31 32

33

34

35

36

37

If we could have document MSC.5014.0001.0532 Q. Yes. brought up, please. We've got internet down. So are you aware of whether the committee that performed the 2023 review considered whether to seek interim or emergency extension to the EMO to cover all of the high susceptibility areas? In short, no. I mean, to my knowledge, no.

38 39 40

41

42

Thank you. Can I turn to the informal process Q. for landslide susceptibility assessment concept, which you would have heard me discuss with Mr Oz at some length. Α. Correct.

43 44 45

46

47

It's at 63 to 67 of your 17 April statement, just to So you've been at the shire for a orientate others. significant period of time. Can you explain to the chair

Α.

what your understanding is of the practice in respect of high susceptibility applications in high susceptibility areas?

A. Yes. I suppose it also probably requires a little bit of an understanding of the planning permit process when a planning application is lodged, and I'll try and be as brief as I can. Essentially, when applications are received by the shire there's a matrix document that identifies, I suppose, who would be responsible for each part of the planning permit process or decision. It's essentially like a decision matrix for identifying what the right process is to follow and who can sign off on things or who can allocate a file, as an example.

> So, essentially, all new planning permits or amendments to planning permits would be allocated - like, would receive it from the permit applicant, there would be a check of it to make sure everything is there and ready to go, and then it would be allocated by a team leader or principal planner with experience in the field, and they would decide who to allocate the application to. would review not just the planning scheme provisions, like the overlays within the planning scheme, but they would review the GIS layer, which has those other overlays that I mentioned, one of them being the land susceptibility mapping, and they would make notes or - you know, when they're allocating it to someone they would make notes to say, "Look, there are these other things that you need to be aware of" or there might be some issue with the design or something like that. So then that would go generally to the planner, and then they would start the process of assessing it.

The first step of that is a preliminary assessment and filling out the delegate report. As part of that consideration they would also open their GIS layers and have a look at those set parameters, the zone, the overlay, the particular provisions of the scheme, and anything else that might be of relevance. And then essentially where, I suppose, this is probably leading to is that one of those considerations would be the land susceptibility mapping and an internal sort of guideline, I suppose, to assist in that.

 Q. Yes. And when you say an internal guideline you don't mean - until recently you don't mean a documented guideline; you just mean a common practice that you've

experienced within the shire?
A. Correct.

CHAIRPERSON: Mr Simon, how do new planners within the shire know to look at the GIS data? Is there an internal document directing them to look at the data? Yes, in short. It's probably a bit complicated in that over the last few years we've been trying to refine our systems and processes and sort of internal policies. But even when I arrived at the shire in 2021 there would be multiple sort of internal documents around inducting new So if you had a new graduate from university that's come in and never touched a file before they would, I suppose, be directed or led to council's corporate management system, the system that - their records management system, the system that processes applications, the GIS layers and all that. So they would have a buddy system where they would have someone more senior and experienced show them all these things.

And there would be probably - again, we're trying to rationalise all this and it's been a work in process, but essentially even prior to my time there would have been documents and things that would assist someone understanding what their roles and responsibilities are. And templates. So we have a lot of templates in the system that generates a preliminary assessment, allocation notes, a delegate report that gets filled out and signed off at the end of the process as well.

CHAIRPERSON: So does the induction documentation direct planners to look at the GIS data?

A. Yes. And even the document I'm aware of - never - it was pre my time, but a document I'm aware of from I think it was probably pre-COVID times where, say, the development engineering team would come regularly to a planning meeting or with new inductees and they would have a PowerPoint presentation that says, "Here are the key things that development engineering does and looks at," and one of those things would be landslip risk. So that's how it would be picked up.

 And also there would have been a referrals matrix. I think it was basically an Excel spreadsheet that would identify exactly that, what the engineering team did want to know about or didn't want to know about, so that you could avoid unnecessary referrals as well.

CHAIRPERSON: Thank you.

3 4

5

6

7

8

9

10 11 MR DI STEFANO: Thank you. Can I have document MSC.5005.0044.5961 brought up, please. This is a document referred to at paragraph 63 of your statement, of your 17 April statement. This was prepared in March of this year; is that correct?

A. It's probably the latest revision, yes. But there would have been probably other work done prior to that where it's possibly changed over time. And they're not necessarily an official document or anything that we've actually used or implemented.

13 14 15

16

17

18 19

20

21

22

23

24

25

26 27

28

29

12

So are there other versions of this document? Q. Α. I can't actually speak to that because There may be. I'm not the author of the report. But we've been working on something like this - when I say "we" as in the planning leadership sort of team - in conjunction with the development engineering team to try and come up with something to more formally document the process. that's, I suppose, probably irrespective of the McCrae landslides, 2022 or 2025, however you look at it, because this is something that again it's not just the McCrae area that's potentially of landslide susceptibility and risk, it's the whole of the peninsula that we have a potential issue with that we need to look at. So this is a document to try and capture that risk again conservatively shire-wide to ensure that there are checks and balances in

30 31 32

33

34

35

36

37

38

Q. Are you aware of whether production has been made of any of the previous documents that contain a similar process that you're referring to?

A. To my understanding no and perhaps - or rather

A. To my understanding, no, and perhaps - or rather, I think, is because I'm not sure that they were ever relied upon or put into practice because it still required more time and energy to go into understanding what the relevant parameters are to inform a position.

39 40 41

42

43

Q. Okay. So then is this the first document that has been put into practice as an active memo, if you like?

A. Other than things that may have been around prior to my time, yes, to my knowledge.

44 45 46

47

Q. Yes. And do you have any reason to think there were things prior to your time?

place.

Again, I've never actually sort of been involved 1 2 in the preparation or the process in that. So my knowledge 3 But I'm aware that, say, on previous files is limited. 4 going back pre-COVID there would have been communications 5 between applicants and council about the landslip 6 susceptibility mapping. So there would have been - I'm 7 assuming that; I can't guarantee that - but I'm assuming 8 that people were following a set procedure or being 9 conservative about referring documents or referring applications to develop engineering and them asking for 10

12 13

Could we go to the second page of this document. Sorry, just stay on this page. It says here it has steps. Step 1 is the site in an EMO. And then step 2 says, "Is the site in an area of high (red) landslide risk?" Then if we go over to the next page, "This layer is assessed one of two ways, through the planning module landslip susceptibility layer or the investigations module." says there, both use the same mapping or produce the same mapping, and that's the 2012 GIS mapping that we were looking at before as translated into your data?

Α. Correct.

that information.

23 24

- Q. Your system, I should say?
- Α. Yes, our systems.

26 27 28

29

30

31 32

25

11

14

15

16

17

18 19

20

21

22

Q. And then you can see, "If the work take place within or the works are likely to impact the land shows as red in the landslip susceptibility layer, the statutory planner continues to step 3." And then step 3 requires additional steps, including potentially the reference to an engineer? Α. Correct.

33 34 35

It doesn't mention specifically the quantitative assessment?

Sorry, in step 3? Α.

37 38 39

36

- Well, in the document? Q.
- Α. Yes. Yes, that's right.

40 41 42

43

44

45

- So do you consider this to be the equivalent of Q. applying EM05 then?
- Not necessarily in that, I suppose, this is probably a precursor to requesting such information if it's considered relevant for that particular application.

A. And, again, as I said earlier, like, it really does depend on not just the site but also what's being proposed in a particular application as to whether it's relevant or not.

Q. Yes. And it also - the trigger event, if it's not within an EMO, is if it's high landslip susceptibility; is that correct?

A. Yes.

Q. Yes. You would have heard me have a discussion with Mr Oz yesterday about some of the adjectives used in his statement to describe how uniformly applied the informal process is that's documented in this document is across planning within the shire, and he said or his statement states that it's his understanding that the shire practice - I withdraw all of that. "It has been the shire's practice to impose additional planning requirements on all properties that are mapped as falling within the areas coloured red." And are you able to confidently say that that requirement is applied to all properties that are coloured red?

A. To my knowledge, yes. And I think again the only caveat there is depending on what the application is for, and that was perhaps beyond the realm of Mr Oz's ability to clarify. And I think that's an important distinction, though, because, irrespective of whether there's an EMO or not, the same logic can apply because, as an example, if we were considering an application on 10-12 View Point Road, even if there is an EMO, there's matters that could be exempt anyway by State provisions such as a swimming pool, as an example, unless the schedule specifically calls that out as a risk and obviously considers it.

 So to the extent that - I suppose the logic behind this stepping, and I'm not saying it's necessarily bullet-proof, but the logic is that as you step through if you've got an application under consideration already, irrespective of an EMO, if it's in the red area it should form part of your consideration even in the absence of an EMO. So the same rules would apply if there was an EMO, essentially.

 Q. We just looked at the document and it doesn't contain all the same rules as would apply when there's EMO4 or 5? A. Correct.

- 2
- 3 doesn't completely map the requirements that are required 4 under EM05?
- 5 6
 - That's correct. But it would be no different to the EM01. 2 and 3 then either.

Q. That's true. 8

Yes.

Α.

9

10 It also doesn't apply when no application is made 11 because no EMO requires an application to be made? 12 13 Correct.

14 15

16

17

18

So do you think it's fair to describe it as being comprehensive, as Mr Oz does, in paragraph 47? I can read you the whole quote if the context --

So, even on the face of the new summary document, it

It's probably not necessary. I think as comprehensive as it can be, yes

19 20 21

22

23

24

25

- But not as comprehensive as if EMO5 applied to that Q. area?
- Well, going back to the point I made earlier, EM05 is not really relevant because it's based on its own specific geotechnical assessment of that area. So I think to assume that that would --

26 27

> Q. Sorry, the requirements within EM05?

> > The requirements, yes.

28 29 30

> 31 32

You're aware that - well, at least it's in your statements - that planning permit applications were made in respect of 10-12 View Point Road?

33 34

Α. Correct.

Α.

35 36

37 38

39

40

And in your 11 April statement you respond to the question asked of you by the board of inquiry for, "In relation to each affected property identified (based on the shire's records)" - and I interpose to note that affected properties include 10-12 View Point Road? Correct. Α.

41

- 42
- 5.4, "Any construction plans or other planning 43 44 documents submitted to the shire for the purpose of any 45 construction upon each affected property." Α. Yes.

46

Q. And if you look at the next email up you can see the response from CivilTest. The same page but if you zoom in at the top of that. It says, the last sentence there, "Please also contact the Mornington council for further information as they may require a detailed slope assessment." If we can look at the next email, please. So that's CivilTest telling a domestic engineer that, "You might require a more detailed slope assessment."

A. Yes.

Q. And then the response is, "Thank you." And then if we can look at the next response up from that. There's a question about doing the slope stability analysis. And if we can look at the next email. Thank you very much. You can see in the second sentence, "However the sunroom and terrace area is very steep and needs a slope assessment." So this is coming from CivilTest. "Please contact Mornington Peninsula Shire, as they normally have specific requirement for sites on a steep slope like this, and then we can quote for a slope stability assessment ...".

If we go to the top email. That email chain is forwarded to the shire, and the top email is the shire's sorry, if you go to the very first page of the document. You'll see there, "Please find attached GIS screen dump showing Mornington Peninsula Shire landslip susceptibility mapping in the vicinity of the above property."

And then the third paragraph, "The proposed development works appear to be located within the potential medium landslip susceptibility areas of the site." Then the next paragraph, "Please find attached a copy of potential geotechnical investigation work required for a moderate landslip susceptibility area." So this is in effect a play out of what you have just described in terms of correspondence coming in for an application for a planning permit, an analysis within the shire of that, and an assessment of the landslip susceptibility?

A. To an extent, yes.

- 1 Q. To an extent.
 - A. Yes.

- Q. But, when you say "to an extent", this also reflects the human judgment aspect of that?
- A. Correct.

- Q. Of that process?
- 9 A. It does, yes.

- Q. Here the relevant statutory planning officer has assessed this as being of a medium risk.
- A. Sorry, well, maybe just to clarify, Tony is a development engineer, not a planner.

- Q. My apologies. My apologies. So can you explain why this would end up with a development engineer, not a planner?
- A. I suppose, in short, similar to that internal working document we've been developing and working on, effectively the rationale is that they would be better placed even though they're not a geotechnical expert, they would be better placed to provide some guidance or advice as to when it would be appropriate or not to request that geotech engineering assessment, mainly because, again, a lot of planners, whilst they might have other various
- planners, whilst they might have other various qualifications or backgrounds before they enter the planning realm, unless they are a geotech engineer they're probably going to struggle to have the level of knowledge required to make that call. And so the development engineers would often be consulted, whether formally or
- informally through the planning permit process, around whether they think it would be relevant.

And in this case, again, without even seeing the map of the land and the slope and everything, I can almost guarantee I know why Tony has gone back to clarify it's actually not that high risk, it's in moderate, because of the location of those works. To be fair or respectful as I can be to the person that suggested it was potentially high risk, maybe they didn't look at the contours of the land, because those additions on either side of the house are quite a flat area.

Q. Let's go to the plans so we can look at exactly what we're talking about. So the plans are at MSC.5002.0001.0090. So we're talking here about a planning

Correct. Α.

Yes.

Α.

5 6

7

8

9

10

11 12

And if you zoom in on the collection of circles with dotted lines around them, please, on the middle right of Thank you. You can see here that in the top this diagram. right it says, "Existing trees shown dashed to be removed." And you can see there there's one, two, three, four, five, what looks like six or seven trees throughout that middle section of the terrace that are being permitted --Α. Yes.

13 14 15

16 17

18

19

-- or applied to be removed. And then an additional tree, if you look at the front near the driveway there's another dashed tree to be removed. And if we zoom out again we can see here that these are the trees that are at the top of the escarpment. You can see the contour lines there in that.

20 21 22

23

24

25

26 27

28

29

30

31

32

33

34

35

- So, just to come back to what you explained to us before, personnel within the council, whether in the engineering team or the planning team, have looked at this application and the location of those proposed works and
- formed the view that that's medium this has a medium susceptibility of landslip, not high susceptibility of landslip?
- Α. And I think it might be helpful to - if we Correct. do have an overlay of where the red area applies to this land, because it's not uniform or covering the whole area, I think we'll find - I could be wrong, but I think we'll find that the extensions which are - I'm not sure if it helps for me to point to this screen here, but my understanding is that - sorry.

36 37 38

39

40

41 42

43

44

45

- Q. We've had enough IT troubles without the TV blowing up.
- The area of red roughly follows Α. Sorry about that. this edge, which has been invariably referred to as cliff But not - again, as I said earlier, the red doesn't necessarily align with that all the way along. area of yellow will probably come somewhere through here. The relevant extensions and the garage we're talking about is the extension here to the west, extension there to the east, and that garage.

- Q. So if you zoom in there where your red cursor is you can see "proposed terrace"?
 - A. Correct.

- Q. So as I understand these drawings --
 - A. This bit here is the wall for this terrace.

- Q. That's right. And so there's proposed works basically to the top of the cliff edge?
- A. Close, yes. I mean, that's the edge.

- Q. Within metres. Within metres of the cliff edge.
- A. Yes, that one.

- Q. And the removal of trees also within metres of the cliff edge.
- A. Correct. But I believe and, again, I could be wrong if we go to a plan where we show an extract of --

- Q. Yes, we can do that.
- A. The red would roughly come through here somewhere.

Q. Can we have MSC.5014.0001.0068 brought up, please. We might need someone to look at that TV. Maybe not now. If possible if we can have them side by side, but I don't want to ask too much. Okay. So maybe I think we can all see. Where the red - what you were describing before is where the red 10-12 View Point Road is outlined here, the property boundary in blue, and the red is the high susceptibility zone and it kind of cuts back alongside the cliff line and it looks like it comes up almost to the back of the house and then cuts across. So the area in yellow there, which is medium, pretty squarely covers the area that was the subject of this permit.

A. Yes. I would say that the majority of the works that were as part of the permit are either in the green or the yellow.

Q. Yes. So then, in your view, that was the correct application of the informal practice?

A. Based on the evidence we've got, yes.

Q. Yes. And are you aware that that planning permit was extended multiple times? This is planning permit P15/1503. A. Can you clarify "extended"?

.09/05/2025

(3)

- Q. Yes, the time for performance of the works was extended by secondary consent.
 - A. So, to clarify, secondary consent is not necessarily an extension of the planning permit in terms of the time that you can enact on the permit, and that's a separate thing in the Act relating to the expiry of the permit itself. Secondary consent is a mechanism under generally the first or second condition of a planning permit might outline that "works must be generally in accordance with" or words to that effect, must generally be in accordance with the endorsed plans, unless otherwise with the consent of the responsible authority. I won't go into the details of why that exists or whatever else, but suffice to say there's numerous VCAT decisions like red dot decisions of VCAT about when secondary consent is appropriate and all that.

- Q. That's okay. Thank you.
- A. So there was one application subsequent to this, like, the original, that sought secondary consent. And then I believe the second one on that site was actually withdrawn. I don't think it was actually enacted on.

- Q. Yes. So if the red area here had been covered by EM05 do you think the same outcome would have occurred in respect of this planning application? Would the same documents have been required or do you think it's more likely that the planning officer would have asked for the quantitative assessment?
- A. I think that's a difficult I think I'd have to speculate to answer that question.

- Q. I'm asking you to speculate.
- A. Yes. Yes, I think the same outcome would likely have occurred in that context.

Q. You accept, though, don't you that - if I can list to you what I think are the inferiorities of the informal process against the EM05.

A. Sure.

- Q. It relies, firstly, on an application actually being made.
- A. Correct.

Q. Which may or may not be triggered, as we discussed earlier. It relies on the particular statutory planning

officer who receives that application making a judgment call based on lines, and we've discussed about how the actual topographical lines which the GIS data is based on aren't necessarily accurate down to the order of metres which would be required in certain circumstances. I mean, this might be one.

EMOs are mandatory and have statutory force, irrespective of a discretionary request within the shoehorn of another power. In a sense a corollary of the previous points but separately, I think, with the informal practice you can't be 100 per cent confident that it's been uniformly applied across all high susceptibility areas because, for example, just an error might be made in reviewing the - or someone might be too new and they might not have fully absorbed the training.

A. I think that's also fair to say, though, even if an EMO does apply.

- Q. That might be true.
- A. They might miss that, and that does happen.

Q. And also there would be scenarios where, as we discussed earlier, people would push back on application of the informal system as opposed to an EMO, which they couldn't possibly push back on because it's by force of law.

A. Yes, to an extent I would agree with that because, again, we have people push back on, say, a landscaping plan when clearly - say, for a two unit development, we ask for a landscape plan, which is clearly required in the planning scheme, and we have a developer push back to say, "I'm not providing you a landscape plan."

Q. Yes. Thank you. In the period between 2022 and 2025, January 2025 at least, is it fair to say that based on the enquiries you've made you're not aware of the shire having changed any of its policies in respect of planning applications in high susceptibility areas?

A. With respect to that, no, not directly; no.

Q. Thank you. Can I turn to a different topic. It's really just something to note for the benefit of the chair. Your 17 April statement includes as schedule 2 a list of what appears to be all of the correspondence between Mr Dane Pope and the shire in respect of his investigations, and it contains an explanation of those

8

9

10 11

12

13 14

15

16

17

18

19

I don't have any specific further questions, but is there anything that you would like to add to the discussion we've had in respect of the application of the informal system?

A. I think probably to just highlight that I think some of the - or the rationale behind some of my answers leads to probably more the question around, you know, is the EMO itself the appropriate tool or is it fit for purpose to capture or mitigate risk. And I think I've reflected strongly on that and, I suppose, some of the line of questioning you had for Mr Oz yesterday ran to that point around should council have done something. But I think, to be fair, that's not necessarily asking the right question, with respect. I understand why you're asking that.

20 21 22

23

24

25

26 27

28

29

30

31

32

33

34

35

You don't need to use "respect"; that's fine. Q. It's a very relevant It's very relevant; right? But I think if you look at what the EMO does, not just on the Mornington Peninsula but statewide, if it's not fit for purpose in its current form and doesn't allow council to proactively mitigate risk, then where does that And I think that if you have a planning permit process at the moment that really only looks prospectively at potential future risk, not the existing risk, and even the mapping that we've got there, the red areas and such, they - even the 2012 report itself says that the red areas don't include runout. So you could be proposing something on 10-12 View Point Road that it does affect downhill, yet that risk technically hasn't been mapped. It's considered --

36 37 38

Q. Or that particular land is not susceptible to landslip, but it is susceptible to the consequences of landslip.

40 41 42

43

44

45

46 47

39

A. Correct. So I think if you were to look at it holistically I think the starting point would be does the EMO - is it fit for purpose and does the Act itself give it power to be fit for purpose if that's the aim. And I tend to think the answer to that question is probably no because it also doesn't pick up all those things that might be exempt, like a children's cubby house as an example. So if

you can go and build a children's cubby house on that slope with no planning permit at all then, rightfully, planning is not the place for mitigating that risk. I think then if the question is, "Where does that sit," yes, I don't know that there's legislation to currently cover that.

Q. Thank you. I can say to you that at this stage in the investigation of the inquiry we are looking at cause and looking at what could and should have been done, but recommendations will of course go to what could be done, and we'll invite submissions and you'll have an opportunity to provide your experience on that particular question. I should note that your statement notes that you've got currently considering as a council plans to amend the EMO. But we can discuss that on a later opportunity.

No further questions, Chair.

CHAIRPERSON: Thanks, Mr Simon. That was very helpful. I've just got one question for you. Following the 2022 landslides do you know if council sought authorisation from the planning minister to extend EMO4 and 5 on an interim or emergency basis to 10-12 View Point Road and neighbouring properties?

To my knowledge, no. I suppose the basis for that -Α. they may have, but I doubt that. And the basis for that would be, if we were to try and apply the parameters that apply to EMO4 and 5, they in themselves wouldn't have necessarily mitigated the risk of what occurred on the property in 2022 or 2025, and I think primarily because you would have to first understand the cause of that which, as we've heard from the experts, is likely at least in part due to water. And if they weren't caused as a direct result of building works, at least in 2022, then there would be really no rationale for then saying, "Hey, we need an EMO on here," because if the EMO only controls works it would kind of be applying the wrong tool to cure the wrong problem, if that makes sense.

So if the area where the 2022 landslide happened - and we don't have it up on the map - but if that wasn't subject to any works and maybe excess water in the soils was the cause, then even had the EMO applied previously and was applied rigorously to that 2015 decision, then the chances are the landslide still would have happened. So it wouldn't have been - I suppose it wouldn't have actually been a preventative or mitigating measure to apply to that

1	land.
2	
3	I think because we're still investigating exactly the
4	causes behind all of it - as we heard from the experts it's
5	complicated because of the geology and the water tables and
6	everything that exists there - yes, I think, to be fair,
7	and again I can't put myself in the mind necessarily of the
8	strategic planning team or whoever might be responsible for
9	that area but, to be honest, I think that if you were to
10	sort of run off as a knee-jerk reaction to that to say,
11	"Hey, let's whack an EMO on," it's not necessarily going to
12	cure the problem.
13	
14	CHAIRPERSON: So is the answer you don't think, following
15	the two landslides in '22, that the council did approach
16	the minister?
17	A. To my knowledge, no.
18	7 10 my Kilou Page, Her
19	CHAIRPERSON: And do you know whether there was any
20	consideration given to doing that?
21	A. To my knowledge, no. They may have.
22	
23	CHAIRPERSON: Who would know the answer to that question?
24	A. I probably don't need to speculate too much. I think
25	the manager, Katanya Barlow, and the team leader of
26	strategic planning, Claire Dougall, would probably know the
27	answer to that. I think they probably would have been the
28	ones to contact the department or not.
29	·
30	CHAIRPERSON: Thank you. Are there any questions? No.
31	That completes your evidence, Mr Simon. Thank you for
32	coming.
33	A. Thank you.
34	
35	CHAIRPERSON: I'll excuse you from this hearing block.
36	I think you'll probably be required again in a further
37	hearing block. Thank you.
38	A. Thank you, Madam Chair.
39	
40	MR DI STEFANO: Madam Chair, there are no further
41	witnesses for this afternoon.
42	
43	CHAIRPERSON: Thank you, Mr Di Stefano. We will, unless
44	there are any other matters, adjourn until 10 o'clock on
45	Monday.
46	
47	AT 12.47 PM THE HEARING ADJOURNED UNTIL MONDAY, 12 MAY 2025

	1
