

Residents update

McCrae landslide recovery

14 March 2025

Monitoring data

With monitoring continuing in the exclusion zone, please find attached displacement monitoring data for the period 12am 13 February to 11.59pm 27 February 2025. This data is from the GPS sensors, survey prisms, tilt sensors and radar.

Please note, this is raw data only for the period indicated above. We are unable to form opinions from this data as yet – it still needs to be analysed, interpreted and peer reviewed. Monitoring is continuing and more data is required.

Geotechnical update

Tasks completed/ongoing last week include:

- Dye trace testing
- Pile testing and critical monitoring for pile testing
- Installation of two additional GPS sensors
- Monitoring data release (see attached)
- Weekly survey of prisms

MBS resourcing update

As noted in last week's residents update, there is a critical shortage of suitably qualified personnel in this sector in Australia.

We are continuing to seek further assistance for the MBS, including via the Victorian Building Authority (VBA) and specialised private and government recruiters.

South East Water update

A meeting was held on Wednesday between Derek Rotter and Tim Lloyd – GM Service Delivery at South East Water, to discuss cooperation on further investigations on their assets.

Individual meetings

We have a schedule of meetings planned with property owners from within the exclusion zone.

Red Cross assistance

After seeking permission from your meeting Chairpersons, we have invited a representative from Red Cross to the meeting today. They provide a Psychological First Aid service to people affected by a traumatic event.

You may also be interested in viewing a short video by Doctors Rob Gordon and David Younger, who are two highly respected psychologist in disaster recovery in Australia. Dr Rob Gordon has also assisted in the development of Red Cross recovery programs in Australia and New Zealand.

Planned roadworks

We will be doing repairs on Coburn Avenue next to the Charlesworth Street intersection early next week. We expect the works to be done in one day. Once finished, the road will be re-opened and the current detour removed.
